

You need to implement the following:

1. **User Interface Development:** *Create an interface supporting CRUD (Create, Read, Update, Delete) operations for product management. The implementation must include the following fields:*
 - a. **Product Name:** The official display name of the item.
 - b. **SKU (Stock Keeping Unit):** A unique alphanumeric identifier.
 - c. **Price:** The unit price of the product.
 - d. **Stock Quantity:** The total number of units available.
 - e. **Supplier Email:** Contact information for the primary supplier.
 - f. **Status:** A selection menu containing:
 - In Stock
 - Out of Stock
 - Discontinued
2. **API Integration:** *Design and implement RESTful APIs to integrate the frontend with the database.*
3. **Database Schema:** *Design a PostgreSQL database schema to efficiently store and retrieve product records.*
